Game theory is the study of mathematical models of strategic interaction between rational decision-makers. It has applications in all fields of social science, as well as in logic and computer science. Originally, it addressed zero-sum games, in which one person's gains result in losses for the other participants. Today, game theory applies to a wide range of behavioral relations, and is now an ...

In game theory, a Bayesian game is a game in which the players have incomplete information about the other players. For example, a player may not know the exact payoff functions of the other players, but instead have beliefs about these payoff functions. These beliefs are represented by a probability distribution over the possible payoff functions.. John C. Harsanyi describes a Bayesian game ...

A defining feature of ESEB congresses is the “bottom-up” approach to determining the scientific content of each meeting. The vast majority of the scientific program is arranged in symposia topics that are suggested by ESEB members, and the symposium organisers then also play a major role in selecting the oral and poster presentations from the submitted abstracts and host their symposium at ...

SYMPTOM NETWORKS. The central tenet of the network approach is that mental disorders arise from the causal interaction between symptoms in a network 1, 6. Such causal interaction between symptoms can be interpreted using interventionist theories of causation 38. In this interpretation, the presence of a causal connection means that, if an (experimental or natural) intervention changed the state ...

Advocacy Stop Raising Awareness Already . Too many organizations concentrate on raising awareness about an issue—such as the danger of eating disorders or loss of natural habitat—without knowing how to translate that awareness into action, by getting people to change their behavior or act on their beliefs.
