Because high engine oil temperature can be lethal to many of your 7.3 engine's major components. And though high heat can be caused by numerous things, it's the job of the EOT sensor and the engine coolant temp sensor to detect these conditions and let you know about it before things get to that critical stage.

High Lube Oil Temp On 3508 I am running 2 3508s for generators, we have started to see a high oil temp on one of them. with little or no load we are showing 206. While under load it is running around 208. The jacket water and exhaust temps are all ok. We have checked the oil cooler bypass valve, it is good.

Anyway the test was to see if the old "add a quart for engine protection" was valid. They found that if the oil was high enough in the pan for the crank to make contact with it, oil temp went out the roof and oil pressure dropped dramatically . They actually found the engine had cooler oil and better oil pressure when they ran it a quart LOW.

The 3516C propulsion engine is available with a wide range of ratings that meet IMO II regulations without any additional aftertreatment. These engines provide efficient operation with electronic governing, cold mode start strategy, and programmable low idle to minimize fuel consumption. The 3516C engine also incorporates a closed crankcase ventilation system to lower emissions.
