I Love Harley-Davidson, But You Must Know This

The 88B motor has counter balancing weights in the lower part of the engine which cancel out vibrations. The reason that they use a balanced motor on the Softails is to give the look and feel of a rigid frame motorcycle. All other Harley Davidson motorcycles have rubber mounts which absorb vibrations.

Differences Between 88 and 88B? : V-Twin Forum: Harley ...

Harley also knew that a solid-mounted Twin Cam 88 engine would create too much vibration. The

Factory's solution was the new Twin Cam 88B motor. The Twin Cam B-motor differs from an A-motor in that it has two counter-rotating balancers, one fore and aft of the flywheel assembly, that, together with the flywheels, negate nearly 100 percent of ...
