Hino Truck Engine Problems

Has anyone had overheating issues on their Toyota Hino 338. I have had a lot of problems. It seems the front air intake is not large enough to cool the engine properly. Secondly, It gets bugs built up on it every 3 months and has to be pressure washed. Also, the engine oil blow out sprays onto the transmission.

The 11-14 Hino conventional trucks with rollback beds, and garbage trucks, and mobile paper shredders have some regen problems. A lot of idle time, a lot of stationary running under load. With out physically moving, it won't attempt an automatic regen.

I work on Hino trucks. I'll answer any questions you have ...

The liners are no where near as easy to get in and out like on a Hino, and replacing the main bearings while the engine is in the truck is absolutely impossible. The block splits at the crank centerline, so the engine has to come out and go on a stand, and the block halves separated. It's kind of a pain in the rear.

The real problem isn't your DPF. There is a disconnect between the truck engine manufacturers and OEM truck builders. Engine manufacturers do provide a robust set of ECM (engine control module) parameters for their engines, but truck builders do not program the engine for the specific duty cycle of each unit. Many are unaware of the full capabilities of new low-emissions engines, and most ...
