Fibroblasts are the most common resident cells in ordinary connective tissue. Fibroblasts are responsible for secreting collagen and other elements of the extracellular matrix of connective tissue. In microscopic appearance, fibroblasts lack obvious specialized features. And fibroblasts throughout the body all appear similar to one another, wherever they occur in ordinary connective tissues.

Connective Tissue Study Guide - siumed.edu

Blood vessels are categorized by function. The composition of the wall varies quantitatively among these subcategories. Arteries conduct blood away from the heart and have proportionately more smooth muscle and elastic tissue than veins of comparable size. Arteries are commonly sub-categorized into elastic arteries, muscular arteries, and arterioles.

The utilization of upper limb neural tension testing (ULNTT) and nerve mobilization (NM) or gliding as an evaluation and treatment approach requires that the clinician understand neural biomechanics and the consequences of neuropathology, pain, and movement dysfunction.

Upper Limb Neural Tension Testing and Mobilization : Fact ...

As may be obvious from its name, one of the major functions of connective tissue is to connect tissues and organs. Unlike epithelial tissue, which is composed of cells closely packed with little or no extracellular space in between, connective tissue cells are dispersed in a matrix. The matrix usually includes a large amount of extracellular material produced by the connective tissue cells that ...

A capillary is a small blood vessel from 5 to 10 micrometres (μm) in diameter, and having a wall one endothelial cell thick. They are the smallest blood vessels in the body: they convey blood between the arterioles and venules. These microvessels are the site of exchange of many

substances with the interstitial fluid surrounding them. Substances which exit include water (proximal portion ...
