Hobbing machines, also known as hobbers, are fully automated machines that come in many sizes, because they need to be able to produce anything from tiny instrument gears up to 10 ft (3.0 m) diameter marine gears. Each gear hobbing machine typically consists of a chuck and tailstock, to hold the workpiece or a spindle, a spindle on which the hob is mounted, and a drive motor.

Hobbing - Wikipedia

First problem that jumps out at me is the hob axis has to be set at the hob PL helix angle with respect to the work's plane of rotation. If your CNC control software supports spindle rotation coordinated with work rotation AND has 5 axis capability the hobbed gears on a CNC machine may be a real possibility.

gear hobbing using a CNC mill - practicalmachinist.com

That Atlas lathe is the "heavy duty" model. A whole different lathe from the usual Atlas. Well made and heavy, but still has the miserable little 3/4" spindle hole.

The Involute Curve, Drafting a Gear in CAD and Applications By Nick Carter Introduction: Most of us reach a point in our projects where we have to make use of gears.

The Involute Curve, Drafting a Gear in CAD and Applications

The phrase speeds and feeds or feeds and speeds refers to two separate velocities in machine tool practice, cutting speed and feed rate. They are often considered as a pair because of their combined effect on the cutting process. Each, however, can also be considered and analyzed in its own right.

Speeds and feeds - Wikipedia

1926. Kakusaburo Okamoto established the Okamoto Special Purpose Machine Tool Works as a privately owned company. 1930. With its own technology, the Company developed an automatic spur gear grinding machine (Model ASG-2), regarded until then as the most difficult grinding machine to develop.
