A simple example of harmonic motion is a mass connected to a flexible cantilevered beam. External force, either from a one-time impulse or from a periodic force such as vibration, will cause the system to resonate as the spring alternately stores and imparts energy to the moving mass.

Fundamentals of Vibration - Newport - Photonics Solutions ...

The vibration of a system involves the transfer of its potential energy to kinetic energy and of kinetic energy to potential energy, alternately. If the system is damped, some energy is dissipated in each cycle of vibration and must be replaced by an external source if a state of steady vibration

is to be maintained.
