In geotechnical engineering, soil compaction is the process in which a stress applied to a soil causes densification as air is displaced from the pores between the soil grains. When stress is applied that causes densification due to water (or other liquid) being displaced from between the soil grains, then consolidation, not compaction, has occurred.

Overconsolidated soil. Overconsolidated soil may be defined as "If the initial vertical effective stress of the soil sample is less than the preconsolidation stress, then the vertical effective stress in the field was once higher than its current magnitude, and the soil is called overconsolidated.". Or

Geoteknik er en ingeniørvidenskab, som undersøger vekselvirkningen mellem menneskeskabte konstruktioner og deres underlag, når disse konstruktioner placeres på eller i naturens jord eller bjergarter. Populært kan man beskrive det som videnskaben om, hvordan man stiller tunge ting på jorden uden at de bevæger sig. Egenskaberne for menneskeskabte konstruktioner som huse, havne, metroer ...
