In a real gas turbine, mechanical energy is changed irreversibly (due to internal friction and turbulence) into pressure and thermal energy when the gas is compressed (in either a centrifugal or axial compressor). Heat is added in the combustion chamber and the specific volume of the gas increases, accompanied by a slight loss in pressure. During expansion through the stator and rotor passages ...

A furnace is a device used for high-temperature heating. The name derives from Latin word fornax, which means oven. The heat energy to fuel a furnace may be supplied directly by fuel combustion, by electricity such as the electric arc furnace, or through induction heating in induction furnaces.. In American English and Canadian English usage, the term furnace refers to the household heating ...

where  $l$  is the membrane thickness,  $p_2$  is the upstream pressure, and  $p_1$  is the downstream pressure. Unlike flux, which depends upon  $l$  and  $\Delta p$ ,  $P A$  is typically viewed, to a first approximation, as being a material property that is much less dependent than flux on membrane thickness and  $\Delta p$ . For gas mixtures permeating through polymers,  $\Delta p$  is taken to be the partial pressure difference of the ...
